

EKATERINA CHUKINA

Prague, CZ — chukina.eka@gmail.com — [GitHub](#) — [LinkedIn](#)

Summary

Technical Designer / Gameplay Programmer with industry experience prototyping and implementing gameplay systems, interactions, and content in Unity and proprietary toolsets. Strong focus on hands-on scripting, iteration through testing, gameplay readability, and tuning interactions until they feel clear, responsive, and production-ready.

Experience

Strand Forge

Aug 2025 – Present

Technical Designer / Gameplay Programmer

Prague, Czechia

- Contributed to co-development projects with Bohemia Interactive, implementing interactive content and gameplay features across educational and gameplay-focused projects.
- Implemented a **modular weapon system** in Unity for a fast-paced action prototype, supporting **multiple gun types**, **firing logic**, and **parameter-driven tuning**.
- Designed and implemented enemy archetypes** (chaser / ranged / tank-AOE) with clear behavior patterns, condition-based activation, and tuning for gameplay readability, difficulty, and overall feel.
- Took ownership of technical implementation for level design and narrative features, contributing to feature direction, task prioritization, and day-to-day coordination within a small team.
- Worked iteratively from playtesting and team feedback to refine interactions and improve clarity, responsiveness, and player-facing readability.
- Worked in a **Git-based multi-developer workflow** with branching, merges, and conflict resolution.

Bohemia Interactive

Sep 2024 – Sep 2025

Junior Technical Designer

Prague, Czechia

- Built reusable gameplay features using proprietary Unity-based visual scripting tools, shipping content across **4 released gameplay scenarios**.
- Created a **data-driven quiz system** using localization keys and structured authoring, reducing production time from ~1 week to **2 days**.
- Developed plug-and-play gameplay interactions, including randomized NPC dialogue, object interaction systems, and custom hotbar logic, reused across multiple adventure scenarios.
- Worked closely with QA on RC builds, debugging gameplay issues, aligning implementation with design intent, and integrating feedback into future iterations within sprint constraints.

Multi-Robot Systems Lab (CTU FEE)

Feb 2023 – May 2024

Unreal Engine Developer / Undergraduate Researcher

Prague, Czechia

- Developed large-scale 3D simulation environments in Unreal Engine for robotics and drone research.
- Implemented frustum culling in **C++/Blueprints**, improving rendering efficiency by ~30%.

Projects

Balcony (Solo) | Godot 4.1, Narrative Systems

2026

- Created a short narrative game with state-based narration and multiple endings driven by player choices.
- Designed a data-driven vignette system for windows, choices, and memory fragments, enabling scope control and fast content iteration.

VR App for Lying Patients (Bachelor Thesis) | Unity, C#, Meta Quest 3

2025

- Extended and refactored an existing Unity VR application; developed two original mini-games with audio tutorials.
- Implemented interactions and accessibility features in **C#**, tested with real users, and iterated based on feedback.

Education

Czech Technical University in Prague (CTU)

Sep 2022 – Jun 2025

B.Sc. Computer Science – Games and Computer Graphics

Prague, Czechia

Metropolia University of Applied Sciences

Aug 2023 – Dec 2023

Erasmus+ Exchange Semester – Game Development; GPA: 1.0 (CZ) / 4.0 (US)

Helsinki, Finland

Technical Skills

Engines: Unity, Unreal Engine, Godot

Languages: C#, C/C++, Java, Python

Spoken: English (C1), Russian (Native), Czech (B2)

Workflow: Prototyping, QA Debugging, Playtesting, Git

Technical Design: Gameplay Interactions, Gameplay Systems, Visual Scripting, AI Behaviors, Data-Driven Systems
